To whom it may concern,

The Edson Volunteer Fire Department is proud to be hosting the FireFit Championships this summer.

This highly challenging and entertaining competition will be held June 4th and 5th, 2022 at the Griffiths Park parking lot and features firefighters from across western Canada, featuring your own Edson Firefighters. The competitors will be racing for the right to represent their department at the Canadian National FireFit Championships at Spruce Meadows, AB this fall.

The Edson Fire Department has been involved in the FireFit Championships for several years and have successfully hosted this event 5 times going back to 2011.

Community support is key to making sure these events are successful. A part of that is local business sponsorship.

Any donations are greatly appreciated, and those organizations sponsoring \$1500.00 or more will have the opportunity to advertise through the placement of a banner (3' X 8') on the 5 story competition tower, as well having their names published in local media.

Should you have any questions, please contact myself at any time.

Sincerely,

Tyler Robinson
Fire Chief/SCO-Fire
Edson Fire Department

The Events

Competitors will be donned with SCBA and ushered onto the course. Competitors may have their hands on the Hi-rise Pak. The start commands are "Ready, Go". Competitors must wait for the 'Go' command; an early start may result in a restart or a 2-second false start penalty. Each event must be performed in the order specified below.

Task 1: Stair Climb

The first event is the stair climb with High Rise Pack. The High Rise Pak is a 4foot bundle of 4 inch hose weighing 42 pounds. This is carried on the outside shoulder when moving up the stairs and must be deposited completely in or on the box on the top floor of the tower (40 ft., 6 flights, 62 steps).

Task 2: Hose Hoist

A 45 lb Donut Roll of Angus LDH hose and 5/8" kern-mantle rope are used. The Donut Roll must be hauled 40' up to the top landing of the tower, lifted over the railing and placed in the box on the top of the tower. After completion, competitors race down the tower, ensuring to touch each stair on the way down.

Task 3: Forcible Entry

The Forcible entry evolution utilizes a chopping simulator. Using the 8 lb. shot mallet provided, the competitor moves the beam completely past the decal. Once this task is complete the competitor must place the hammer on the designated 4' x 4' area.

Task 4: Run

Competitors then walk or run as fast as he/she can around the hydrants a distance of 140 ft then shoulders the nozzle end of a 1.75" fully charged Hi-Combat hose-line.

Task 5: Hose Advance

Competitor then drags a 1.75" fully charged Hi-Combat hose-line a distance of 75 ft. Once the nozzle crosses into the Nozzle Zone, the

competitor hits a target with a water stream. Once the target is down the competitor shuts off the nozzle, dropping it to the ground.

Task 6: Victim Rescue

A 165 lb. Rescue Randy mannequin must be dragged backwards a distance of 100 ft. Carrying the dummy in your arms or over your shoulder is not permitted. The Time stops when the competitor crosses the beam at the finish line with the mannequin.
